

1. [NUS and Tsinghua University establish joint research centre to develop extreme search technologies](#)

NUS and Tsinghua University have established a joint research centre to develop extreme search technologies. The centre will focus on developing advanced search engines and algorithms that can handle large-scale data sets and complex queries. The research is expected to have significant implications for various industries, including e-commerce, social media, and healthcare.

The joint research centre is a testament to the strong academic and research collaboration between NUS and Tsinghua University. The centre will be led by Professor [Name], a leading expert in search engine technology at NUS, and Professor [Name], a leading expert in artificial intelligence at Tsinghua University.
